

One scan, **eight pages**, and the donation is made.

This document lays out every page of the charity donation platform: what a customer sees after scanning the QR code in a venue, what sits on each screen, and which fields the admin maintains.

The screens are **functional wireframes** for confirming structure and flow. Visual design has not started.

Based on **Charity Donation Platform Specification v1.3**

Public pages **8** × **Chinese and English**

System emails **4**

Admin modules **N1–N7 (shared club admin)**

SITEMAP

Sitemap: three groups of pages, one main line

The eight pages fall into three groups. The middle group is the **donation line** — the route a customer actually walks. The other two are entry points and supporting pages. Every page exists in Traditional Chinese and English.

ENTRY	DONATION LINE	SUPPORTING
A Printed QR code The main entry. A table card or sticker in the venue; every partner venue gets its own QR code, and donations are attributed to that venue.	1 Scan landing page The venue name plus a wall of project cards.	C Donor roll Named donors only — names, never amounts.
B General entry A direct entry with no venue attached — for example from the club site's charity section.	2 Project page Description and use of funds, with the donation form at the very bottom.	D Impact A summary of delivered charity work, linking back to the full record on the club site.
	3 LINE Pay Leaves the site; returns automatically once payment is complete.	E Privacy policy A separate domain needs its own, covering donor data and invoice data.
	4 Result page Three states: complete, not completed, still processing.	F Donation terms Invoice rules and how funds are used.

The donation journey, screen by screen

What follows is one pass through, in order. The numbers on each screen match the notes beside it. Venue names, project names and amounts are illustrative; the real content is maintained in the admin.

00

Physical entry: the QR code in the venue

[print, not a web page](#)

Every partner venue gets its own QR code

TR

One bowl of noodles keeps a child on the pitch

Haowei Diner — Heping

taichung rock fc / charity

Table card, illustrative (venue name is an example)

Every partner venue gets a **URL of its own**, which is what makes the donations it brings in measurable and its rebate calculable. The admin produces PNG, SVG and a print-ready PDF carrying the venue name.

The URL cannot be derived from a venue number

So nobody can guess another venue's address. The URL also carries no amount or share percentage, so there is nothing worth tampering with.

Error correction level Q (25%), code area at least 3×3 cm

Printed material picks up grease and partial cover; leave the correction and the quiet zone.

Only the three approved logo lockups may be used

No custom typesetting, no SINCE, no year.

Reissuing a URL kills the old QR code immediately

The admin warns explicitly and records who did it; cards already printed have to be collected.

Admin N1 Venues and QR codes

The first thing a customer sees. What matters most is that they **recognise the place they are sitting in** before choosing a project — which is why the venue name sits at the top.

1 Venue identity

The name is required; a logo or photo is optional. With no logo it falls back to a plain text name block rather than leaving an empty frame.

2 About the platform

A short passage on what this platform does and where the money goes. Editable in the admin.

3 Project card wall

Cover image, project name, one-line description, and a "read more and donate" button. **No fundraising progress.**

4 Trust block

A club introduction, registration and tax ID details, and a link back to the charity record on the club site.

5 Footer

Privacy policy, donation terms, contact.

Two behaviours to note

If the partnership has ended, the URL **still opens**; it simply drops the venue block and behaves as the general entry — cards already printed never become dead links.

The first screen must not depend on a large image, so it opens fast on mobile data.

6 FAQ
Invoices, use of funds

This page deliberately **puts the donation form last**: explain the project, be explicit about where the money goes, and let the reader decide at the end. The order is part of the design. **There is no fundraising progress** — the donor sees what the project does, not how far short it is.

1 Cover and title

Project name and a one-line appeal.

2 Project description

Laid out in the admin with a block editor: rich text, images, pull quotes, lists.

3 Use of funds

An explicit statement of where the money goes.

4 Linked charity programme

Optional. Links to the matching programme page on the club site so donors can see past results.

5 Donation form

Amount chips are set per project in the admin, along with a minimum and maximum per donation. Name and email are required, with the email format validated as it is typed. The button states the actual amount, so nobody taps it by accident.

6 FAQ

Invoices, use of funds.

How venue attribution survives the journey

Arriving from the landing page, the URL carries the venue code and it is also written to a short-lived 24-hour cookie. The pink line mid-page — "you are donating via Haowei Diner" — tells the donor about the attribution without overshadowing the project.

If the venue genuinely cannot be resolved, **the donation still goes through**: it is recorded as having no venue, the venue rebate is zero, and the flow is never interrupted.

Admin N2 Projects (amount chips, invoice mode)

03

LINE Pay

An external page, provided by LINE Pay

leaves the site

This page is not ours; LINE Pay provides it. What we own is **what happens before we leave and after we come back**.

The donation record is created before leaving

The form contents are saved before the redirect to LINE Pay.

A failed payment must never force a retype

"Try again" reuses the original donation record rather than creating a second one.

Confirming the same order twice never charges twice

No double posting, no duplicate invoice, no duplicate email. This is a hard requirement.

"Charged but confirmation failed" is never dropped silently

It goes into the admin exception queue and raises an alert for someone to handle.

Admin N3 Donation records (including the exception queue)

04

Result page

Where the donor lands on returning from payment

not indexed

Three states share one address: **complete**, **not completed**, and **processing** while the payment is still being confirmed.

1

Complete

Thanks, order number, amount, project, the status of the invoice or receipt, a share button and a way back.

2

Invoice status is on the page

So the donor does not have to go hunting in their inbox. The email address is masked; no full personal data is displayed.

3

Not completed

Likely reasons, a retry button, and contact details.

Processing must not spin forever

It polls automatically, but the timeout and the copy after it must be defined in advance — and the copy must never read as failure, or people pay twice.

Admin N3 Donation records / N5 Invoices and receipts

05

System emails: four, no more

Every send is written to the club's existing email log

#	EMAIL	TO	WHEN
01	Donation thank-you Order number, amount, project and use of funds	Donor	Immediately after payment
02	E-invoice or receipt notice Invoice or receipt number and a link to view it	Donor	Once issued
03	Issuing failure notice Prompts staff to issue it manually	The club	When issuing fails
04	Refund notice	Donor	After a refund is completed in the admin

SUPPORTING PAGES

The other four pages

Off the main line, but each of them earns its place.

Donor roll

Lists only donors who chose to be named. **No amounts, no email addresses, no venues.** Filterable by project and period. The admin can switch the whole page off, or hide individual entries.

Impact

A summary of the linked charity programmes, leading back to the full record on the club site. **The master content lives on the club site and is not maintained twice.**

Privacy policy

A separate domain must carry its own — a link back to the club site is not enough. It has to cover the purpose and retention period for **donor data and invoice data**. The consent checkbox on the donation form links here.

Donation terms

Invoice rules and how funds are used. The questions people have before donating live here, and the project page FAQ links across.
